supported by  

BIOSIRE helps you to make tourism sustainable by providing

- information about advantages of alternative propulsion for touristic vehicles
- training, consulting and support for fleet owners, regions and municipalities
- a platform for discussion and region to region know-how exchange about lessons learned in BIOSIRE and previous projects

Project implementations

- adaptation of different vehicles (including water transport, off-road vehicles) for biofuel use and electric propulsion in tourism related transport in Mallorca (Spain), La Rochelle (France), Austria, Crete (Greece), Dubrovnik, Mljet and Losinj (Croatia)
- Increase the use of recycled cooking oils for the propulsion of tourism related transport
- Identify the potential for biodiesel production and use in tourist areas in Veneto (Italy), Poland and Croatia
- Involving further regions in workshops and training events

Project Targets

- Shift towards bio-diesel and electric propulsion
- Higher awareness among fleet operators about the benefits of alternative propulsion
- Establish a sustainable production process and favourable legal and market conditions for biodiesel
- Transfer outcomes and recommendations to other tourist areas in Europe
- Involving further regions in workshops and training events
